LIGHTEN YOUR LIGHTING COSTS

Commercial/Industrial Prescriptive Lighting Efficiency Program

Is your commercial lighting the best it can be?

On average, interior lighting accounts for 28 percent of a business's energy consumption. They also are a contributing factor to a facility's productivity, employee morale, and safety.

Lighting technologies developed in the past ten years can help cut your lighting costs up to 80 percent while enhancing lighting quality and reducing environmental impacts.

Metal Halide fixtures commonly found in gymnasiums and warehouses are being replaced with high-efficiency light-emitting diode (LED) technologies that reduce energy use. Retailers are finding similar benefits while upgrading their stores' fluorescent fixtures.

Your utility's Commercial/Industrial Lighting Efficiency Program offers cash incentives to help cover the cost of a variety of energy-efficient upgrades.

Follow these easy steps

- Visit with your electrical utility to discuss your project and pick up an application form.
- Obtain a contractor and install any of the energy-efficient lighting products as identified in the table to the right.
- Complete an application form after installation is complete.
- Submit the signed application, (along with the proof of purchase identified in the application's terms & conditions) to your local utility for the incentive within 90 days of installation.
